

BXO | LOG™

– displays the alarm where you are!

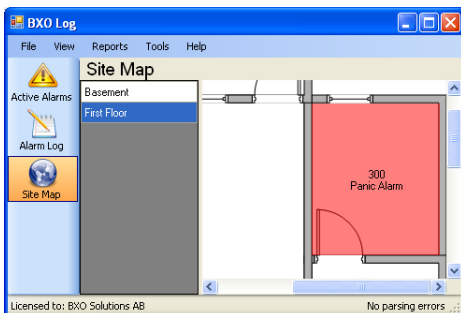

Download
the demo from
our web site.
www.bxo.se

See the alarms as they occur!

BXO Log displays alarms...

- on monitors in corridors
- on your mobile
- on cordless phones
- on pagers

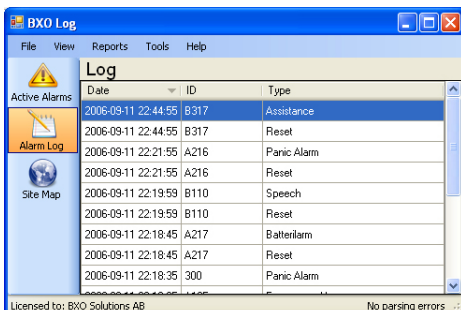

Where's the alarm? You know where to go?

Don't run around looking for room numbers, BXO Log shows the alarms in real time on site map.

- display fixed alarm points or locate portable alarm transmitters.
- see both alarms and presence on the map.
- see in what direction the person is moving.

(site map is an optional module)

What happened? When did it happen?

Maybe you're the one who is to find out why, and prevent it from happening again?

A well designed logging functionality is a requirement for quality assurance of everyday care tasks and maintenance of the alarm system. The logs will also prove an invaluable support in investigating incidents.

Reports

Improve quality and efficiency with useful statistical reports.

- list of alarms; chronologic list of alarm events
- response time; see the time from alarm to check in
- number of alarms per type
- technical alarms
- additional reports on request

Other Features

- system independent logging
- logging of nurse call, fire alarm, etc.
- logging of multiple systems simultaneously
- high performance database solution
- multilingual
- easy to use
- based on state-of-the-art technology
- network enabled
- remote display of alarms
